## Scraper Instructions – Wood Handle

Use 3 large flat washers provided on the back side of the blades between braces and plastic; 1 for each of the 3 bolts.

Attach braces to the same side of the handle that the label is on. When complete the label and braces will be to the front of the scraper.

If the scraper should become twisted during shipping, or thru use, you can bend it back with no danger of breaking the blade. You will not break the blade, it is guaranteed for one year against breakage.

If the blade should become dull or uneven thru use this material can be sharpened just like steel.

We thank you for purchasing the finest, smoothest operating barn scraper on the market today.
