

# Solid Gold Performance for Combines, Hay Machines and Windrowers

## The GOLD'n Rule in Cutting Systems

### Gold Guards...

Out in the field where you need hard nosed, plug resistant guards that get the job done. Crary's exclusive full point/mini point design actually doubles the number of cutting surfaces for twice the cutting action in every sickle stroke. They also reduce plant side movement in half keeping shelling and shatter loss to the absolute minimum.

### Sickle Sections...

The Bear Cut section utilizes a coarse serration that sharpens it's self as wearing occurs. All sickle sections offer bolt-on convenience and are heat treated for superior wear life.

### Hold Downs...

Put the spring back into your cutting system. Any cutting system performs best when well adjusted. Only Crary's Gold n' Cut offers spring loaded adjustable hold downs as a standard feature on combine and hay cutting systems. This innovative feature adjusts pressure with the turn of a bolt, allowing you to maintain uniform hold down pressure while operating a free flowing sickle. Replaceable nylon wear pads offer 3-4 times the life to the hold downs.

### ThunderBolt Sickle...

Crary's piece by piece design lets you build the exact sickle bar length you need. Easy to assemble interlocking/overlapping bar bolts together for greater convenience.

**Call and order your new cutting system today!**

## Crary Gold 'n Cut Hold Downs

### Hold Downs...

Put the spring back into your cutting system. Any cutting system performs best when well adjusted. Only Crary's Gold n' Cut offers spring loaded adjustable hold downs as a standard feature on combine and hay cutting systems. This innovative feature adjusts pressure with the turn of a bolt, allowing you to maintain uniform hold down pressure while operating a free flowing sickle. Replaceable nylon wear pads offer 3-4 times the life to the hold downs.
