Gauge Wheel Arm Repair Kits

A worn arm will cause the wheel to move away from the blade, creating a deterioration of seed furrow definition and creating the opportunity for plugging.

- *Bushing slides over worn pins to eliminate slop.
- *Bushing is threaded for accurate adjustment.
- *Comes with hardware.
- *Eliminates the use of a roll pin by using a set screw and jam nut to hold the wheel on. (7000 planters)

Gauge Wheel Assemblies

New... Patent Pending "Ultra" Gauge Wheel Assembly

Without a doubt, the last gauge wheel unit you'll ever buy!!

Tired of the old nylon/steel gauge wheel assemblies that, after a couple of seasons, the nylon portion of the rim is weakened, the bearing is loose in the nylon portion of the rim and you can't do anything to tighten it except buy a new assembly? Are you tired of using a spud bar to take assemblies apart and a press or worse to reassemble the wheel with a new tire? Best of all, how much fun is it to take the entire wheel apart to simply put a new bearing in the wheel?

We are proud to introduce the "Ultra" Gauge Wheel Assembly. This is an all steel wheel (0.080 thickness) for long wear life. The wheel can be taken apart with a single wrench and a screwdriver. The Patent pending "Captive Rim" design allows the assembly to be put together again with a minimum of pressure. The most you will have to do to reassemble the wheel is step on it to press it together.

Uses a machined bearing hub for greater strength.

To replace the bearing, remove the 4 bolts and nuts, remove the machined bearing retainer caps, replace the bearing and bolt back together in less than 5 minutes. Smooth Nylon covers are installed on the "Ultra" gauge wheel assembly to prevent dirt buildup on the face of the rim. Available in John Deere yellow, black, or Kinze white. The cover is bolted to the rim with 4 bolts and nuts.
